# ALL ABOUT CSABA

Csaba was created with state-of-the-art electronics in solid brass for unsurpassed performance and durability with a modern design that enhances any commercial restroom. Due to the immense success of this design we have created the Csaba range in a wide variety of options. Our sleek line of Csaba faucets and soap dispensers can also now be provided together, as a cost-effective, matching pair. You can choose from the standard size Csaba duo for custom commercial lavatory solutions for hospital and healthcare facility fixtures or the Petite Duo, for commercial washrooms with less space, such as gas stations and on trains and other forms of public transport. Csaba gives you the ability to choose between various water-saving options in the faucet, while the matching Csaba soap dispenser enables maximum savings by allowing control of the soap dosage. In addition, the Csaba soap dispenser with soap level indicator is the ideal way to reduce maintenance costs in high traffic areas with no need for maintenance staff to open the cabinet to check soap level. The soap level indicator, which is in the body of the faucet, shows green when soap tank is full, orange when soap level is low and red when a refill is needed.

# SOAP DISPENSERS WITH SOAP LEVEL INDICATOR

The soap level indicator feature is available on some of our most popular soap dispenser models. This simple yet ingenious technology is the ideal way to reduce maintenance time and costs in high-traffic areas. Now there is no need for maintenance staff to open or unlock the cabinet to check soap level in the tank. Rather than go under the deck and unlock the soap tank just to see if it needs refilling or not, we have incorporated a soap level indicator into the base of the dispensers' body so that the level of the remaining soap in the tank can be seen at only a glance. A small LED light in the body of the dispenser shows green when soap tank is full, orange when soap level is low and red when a refill is needed.

## INVINCIBLE QUADRAT FAUCETS AND SOAP DISPENSERS

The Quadrat touch-free deck mounted faucet and soap dispenser, with their clean, square, modern design, brings minimalist perfection to commercial bathrooms. By taking minimalism to the maximum with simple geometric shapes, Stern's Quadrat line instantly creates a sleek, sophisticated look and feel with its clean and contemporary design. The square shape of the Quadrat fixtures makes an instant statement with its bold, modern style and completes the square collection of touch-free bathroom designs. The Quadrat Series is made of a dense and heavy solid brass which means it will last for a long time without leaking or corroding and it has the ability to withstand high water pressure while remaining beautiful. Designed for long-lasting performance in high traffic applications, it is popular for its strong, robust features and individual, square and even design. The Quadrat range of touchless faucets and soap dispensers are available in

QUADRAT DUO DECK MOUNTED

QUADRAT DUO WALL MOUNTED

two versions, for deck-mounted installations and wall-mounted concealed installations in hollow framed walls. Both models are available with standard length or extra-long spouts as well as in a variety of special finishes and can be powered by either battery or transformer, making them extremely versatile and suitable for any commercial high-traffic location.

## REMODELING? THE UNDERBASIN CABINET IS YOUR SOLUTION!

Today public restrooms need to be equipped with touchless fixtures, it's the new normal. Commercial restroom remodels and renovations are the fastest and most cost-effective way to bring your restroom up to date with Post-Covid recommendations. Switching to touchless fixtures means the addition of various connectors and pipes which may need to be stored under the deck and possibly in full view of users. Our Underbasin Cabinet has been designed to be fitted under the deck in order to hide all of the unsightly pipes and connectors that come along with electronic touchless fixtures so that they can be easily hidden from view. The Underbasin Cabinet is a lockable cabinet with a stylish white panel and oak style frame that hides unsightly pipes and connectors and has the capacity to hold either our 1.6 Gallon (6L) soap tank or our 33.8 FL OZ (1L) soap bottle. It also has a soap level indicator window so that maintenance staff can see the soap level at a glance and don't need to unlock the cabinet in order to see the soap level in the tank, reducing maintenance time and costs.

# COOL

GLASS FILLER FAUCETS FOR DRINKING WATER

Designed by Stern for bars, restaurants and commercial kitchens the Cool touchless glass and bottle filler faucet enables you to quickly and conveniently fill glasses or bottles with drinking water. Installing touch-free glass filler faucets in commercial environments means that staff can quickly fill water glasses without crowding around beverage stations or bars and without the need for touch. Separate water stations free up space and improve efficiency but in today's environment they also need to be touchless for improved hygiene. Our Cool touch-free glass filler faucet is compatible for retrofit installations so you can easily upgrade your touch operated faucet to a new touch free version more suitable for today's environment. Cool glass filler faucets are also suitable for schools and can replace the current touch versions that exist in the corridors of many educational institutions for both hygiene and to prevent crowding in these areas.

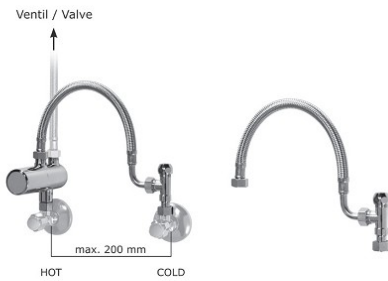

# NOBLE 3032

## FLUSH VALVES FOR TOILETS

Our 1.28 GPF touchless, sensor-operated, concealed flush valve for toilets reduces water waste because it is programmed to provide exactly the right amount of water at the appropriate time, saving resources. The Noble 3032 has been designed with a solid brass valve body, a Stainless Steel AISI316 panel and tamper proof screws for increased vandal protection, making it suitable for a variety of high risk environments. Activated by an automatic infrared sensor, it incorporates an innovative self-adjusting detection range that checks and automatically sets the appropriate sensor range according to the surroundings. This touch free product also features a manual or piezo override push button with anti-block feature just in case you need an extra flush.

# UNDERBASIN TMV THERMOSTATIC MIXING VALVE

Installing a thermostatic mixing valve is the easiest most cost effective way to ensure that water is delivered at the required temperature in order to reduce the risk of scalding as well as reduce hot water consumption. You can use the Underbasin TMV to either set a maximum hot water temperature with the hot water stop function or to set a mixed water temperature level that is fixed by setting and locking the levels of hot water. Designed specifically for use in highrisk applications such as hospitals and aged care homes or in fact any other commercial facility, our lead free solution is very easy to install directly to the angle valves under the basin with or without the optional connection kit. Built-in filters prevent dirt from entering the system and back check valves that prevent hot water entering the cold water inlet.
